# Lab Task - 1

Create a project named Shop and develop the following classes:

| **Product** |
| --- |
| int productId<br>string productName<br>string manufacturerName<br>double price<br>int availableQuantity |
| int ProductId<br>string ProductName<br>string ManufacturerName<br>double Price<br>int AvailableQuantity<br><br>Product( )<br>Product(int, string, string, double, int) |

| **Employee** |
| --- |
| string empId<br>string empName<br>double salary<br>string designation |
| string EmpId<br>string EmpName<br>double Salary<br>string Designation<br><br>Employee( )<br>Employee(string, string, double, string) |

| **Program** |
| --- |
| The class Program contains the main method. Inside the main method create two objects of Product and two objects of Employee. Demonstrate all the properties and constructors from the main method. |
